

Transmission Business Line (TBL)

BULLETIN **DYNAMIC SCHEDULES LIMITS**

Posted: May 18, 2006

Effective: June 15, 2006

Effective June 15, 2006, Dynamic Schedules will be limited to 200 MW in aggregate during 0600 to 2200 every day and 550 MW during 2200 to 0600 every day over the California-Oregon Intertie (COI).

Transmission Customers (Customers) who want to use their firm COI capacity for Dynamic Schedules must follow the scheduling procedure described below.

1. To become a participant, an Entity must meet the requirements in the current Dynamic Scheduling Business Practice.
2. Participants must notify TBL Pre-Schedule by fax of the amount of Dynamic Schedules capacity (capacity) they want to use by 08:00:00 Pacific Prevailing Time (PPT) of the Pre-Schedule day. The fax should include the account number and path, MW per hour, and day total. TBL's Pre-Schedule fax number is 360-418-8208. TBL Pre-Schedule will not accept requests for Dynamic Schedules capacity after 08:00:00 PPT.
3. Participants must submit the amount of capacity requested for Saturday, Sunday, and Monday to the TBL Pre-Schedule desk no later than 08:00:00 PPT on the previous Friday.
4. The amount requested must be entered for each hour or the requested amount will be assumed zero, and the participant will have no allocation for that hour.
5. TBL's Pre-Schedule staff will run the allocation program and enter each participant's allocation in the appropriate Real-Time Operations Dispatch and Scheduling System (RODS) account for capacity (product code 3D or 3N).
6. Notification of the participant's allocation of capacity shall be done by fax to the participant no later than 09:45 PPT.
7. The participants will then modify their capacity account (product codes 3D or 3N for non-FCRTS capacity) to be equal to or less than their allocation.
8. Final Pre-Scheduled Dynamic Schedules will be submitted to TBL no later than one (1) hour after the close of the California final Day-Ahead Market.
9. Pre-Schedule staff will check the capacity accounts by close of Pre-Schedule to ensure that each account is not greater than the allocated amount. If the participant is over its capacity allocation the TBL Pre-Schedule staff shall reduce the schedule and notify the participant.
10. The participants can decrease their capacity accounts as needed in Real-Time 30 minutes prior to the hour of delivery, but each account should contain only the capacity needed to meet the Customer's obligation in the CAISO market or other COI transaction.

TBL will continue to limit the Dynamic Schedules over the Northern Intertie to 300 MW in aggregate consistent with the Dynamic Schedules Limits posting of August 22, 2005.

This Notice replaces the Dynamic Schedules Limits Notice posted on 3/27/2006.
